<p>13-15 years (Apr 2027 - Apr 2029)</p>	<p>Booster: meningitis C The MenC vaccine protects against Meningococcal group C which can cause meningitis and septicaemia.</p>	<input type="checkbox"/>
<p>13-18 years (Apr 2027 - Apr 2032)</p>	<p>Booster: diphtheria, tetanus, polio The Td/IPV booster vaccine tops up the protection against tetanus, diphtheria and polio.</p>	<input type="checkbox"/>

All information in this chart is correct as of November 2013. The recommendations made are based on what you have told us and do not constitute medical advice. You should always talk to an appropriate health professional about immunisation. If your child has a long term chronic condition or has no spleen, they may need extra immunisations. As a result this schedule only applies to those who need routine immunisation. In other cases you should consult your doctor or nurse directly.
